

Dear member,

This year, as usual, your Association will cleanup the sides of Lac-Malaga Road and branches will be shredded. **You can take the opportunity to have the branches that you picked up on your property shredded by our contractor.**

Given the pruning work carried out by Hydro-Québec during the winter, the amount of branches to be shredded is considerable. We therefore ask for your cooperation to facilitate the work:

- The branches (6 inches maximum in diameter) must be piled on the side of the road, all laying in the same direction.
- The long branches must be cut into 8 feet maximum length with the bigger end placed toward the road.
- To make the shredding easier, please do not mix other waste (rotten wood, leaves, etc.) with the branches.
- The wood chips will not be removed but left on your property.
- **The shredding is scheduled to start by May 24th**, weather permitting.

Best regards,

Your Board of Directors
